Welcome to Breckland Garden Buildings

Breckland Garden Buildings was established in November 2018, since then we have become a main competitor in the timber garden building industry.

We are a small friendly team that are committed to providing you with your perfect Garden Room. We pride ourselves on exceptional quality and customer service which is the foundation and driving force for all decisions regarding materials, production, installation and customer relations.

With our vast team experience in the industry of over 80 years, no matter what style of building you require we can make it; our designs are versatile, and we can fit them to your needs.

From the purchase and construction to the delivery and installation, all of which is carried out by our own staff we will make the process as seamless and convenient as possible with aftercare dealt with as a priority.

All our studios come with a 12 month guarantee against faulty parts and workmanship and 10 years against wood rot and fungal disease when treated and maintained in line with our recommendations.

Please take a moment to look through our brochure, where you will find details of our buildings and different options we offer.

We look forward to helping you create your perfect garden building

APEX GARDEN STUDIO

13' x 8' Apex garden studio. Thermowood cladding, UPVC doors & windows in anthracite grey, full length glazing, double glazed glass, MDF (V grooved) painted lining (White) with breathable membrane (moisture barrier) and Celotex insulation, painted finish in Linen, slate effect tile roof, laminate floor, black guttering, black handles & levers.

STANDARD SPECIFICATION

• CLADDING

Redwood Thermowood tongue & groove 19mm x 125mm (16mm finish), solvent treatment to cladding & roof

• FLOOR

18mm moisture resistant chipboard & 3" x 2" pressure treated redwood floor joists

• ROOF

16mm (12mm finish size) tongue & groove with heavy duty green mineral felt

• ROOF OVERHANG

12" overhang to front & 4" to other sides

• DOORS & WINDOWS

UPVC double glazed units 4mm - 20mm - 4mm clear toughened, in a choice of full length, ¾ length & half length. Includes door (single or double) and 2 opening top vent or opening windows

OPTIONAL EXTRAS

- Painted external finish
- Painted internal V grooved MDF (9mm), moisture resistant membrane & insulation (painted white as standard)
- Partition
- Open sided area
- Integral veranda
- Extra board of height
- Additional UPVC doors & windows
- Aluminium doors & windows
- Side hung windows (available on some sizes)
- Shed/Summerhouse doors & windows
- No floor
- Bolt down
- Attach to existing building
- Guttering & Downpipes
- Workbenches & Shelves
- Slate effect tile roof
- Cedar Shingle roof
- Solid internal white door
- Composite decking
- Laminate flooring

STANDARD PAINT COLOUR OPTIONS

These colours are for illustration purposes only, brochures and monitors will not show an exact representation of the colour as it would do on timber, therefore we advise that when selecting a final colour to visit our sales agent Bourne Buildings showsite, where we have paint colour sample boards.

Our comprehensive paint system includes a primer coat that contains protection against knot bleed, however due to the natural properties of timber we cannot guarantee knot bleed will not occur.

OPTIONS & FURTHER INFORMATION

STUDIO OPTIONS

Painted MDF lining and insulation - Building is lined internally with V grooved long grain MDF (9mm) for an exceptional look, with breathable membrane & Celotex (thickness 25mm) or equivalent insulation underneath.

Painted finish - Our comprehensive paint process includes a primer undercoat that contains anti knot bleed formula with 2 top coats of your paint colour choice, providing a professional finish and protection against harsh environments and wood rot.

Paint may weather and may require maintenance after a certain period of years.

Felted roof - We use heavy duty felt as standard on Apex & Hipped garden studios (32kg).

EPDM Rubber Roof - This is a synthetic rubber with little to no maintenance with a life expectancy of up to 50 years. Suitable for Pent and Apex roofs.

Slate effect tile roof - Is a composite roof tile made from mineral reinforced 99% recycled and re-engineered materials. Its unique structure makes it light weight and gives it superior strength and requires little to no maintenance. Suitable for Apex roofs only.

Cedar Shingle Roof - Western Cedar Shingle is a renewable and sustainable roofing material that is light weight yet durable and provides a high degree of thermal insulation. Suitable for Apex roofs only.

Guttering - Guttering & downpipe (Black)

Veranda and overhangs - You can add an integrated open sided area or integrated veranda to your building at no extra cost.

Composite decking - Our decking boards are manufactured using a combination of recycled plastic, recycled natural wood fibres and a small number of additives to boost anti-UV and anti-ageing properties. Our decking boards are a unique 3D embossed woodgrain or deep grooved channel finish to choose from so are fully reversible.

Fit customer cables - The installation team will thread through any cables internally in the wall cavity before the MDF lining is installed on the day of installation. They will do this for a "reasonable" number of cables, but for extensive or complicated wiring, we would recommend you instruct a professional for this. All you need to do is supply a plan for where these are going a week prior to delivery, and the cables on the day, and the installation team will do the rest. Once the building is complete, you can then arrange for an electrician to cut socket holes, attach sockets and lights, and connect the building up to the house.

24" painted workbench	£155	£181	£207	£233	£259

Shelves & workbenches will be painted the same colour as MDF lining (white as standard) at no extra cost.

IMPORTANT INFORMATION

Breckland are with you from start to finish, from manufacture to delivery and installation, all carried out by our own specially trained staff.

Our Garden Studios are manufactured using Scandinavian Redwood pine throughout which has been through a heat treatment process which gives it its name Thermowood.

Thermowood, also known as heat treated timber, is a beautiful, sustainable timber material produced using chemical-free heat treatment. The intensive heat the wood is exposed to during its production dries out deep into the core, causing all moisture and resin to be removed from the timber.

Thermowood therefore doesn't react to changes in humidity as drastically as untreated wood (the risk of swelling, cracking and shrinkage is decreased), allowing it to retain its shape far better. The wood also doesn't secrete sap or resin even in high temperatures and its average life span is prolonged.

All our Studios come with a 12 month guarantee against faulty parts and workmanship, and 10 years against wood rot and fungal disease when treated and maintained in line with our recommendations. We recommend that all buildings are cleared regularly of any build-up of debris sitting against the outside walls, such as wet leaves, that will cause prolonged exposure to moisture. We recommend that all tanalised or thermowood buildings are given a coat of solvent based treatment as soon as possible after installation (if not already included in order) to prevent moisture ingress, followed by a further application at least every 6-8 years. Buildings that have not been tanalised/thermowood require treating on an annual basis. All painted buildings should be inspected on an annual basis for any areas where paint has started to deteriorate over time, peeling or flaking, and repaint where necessary. A full repaint is recommended every 6 - 8 years.

We require the base for the building to be a flat, level (determined by a spirit level), square, clear and complete base, either decking, paving or concrete. If you are unsure on what type of base that will be suitable please contact us and we will advise you in more detail. If a base is not suitable for the building to be installed on the days allocated for the installation the customer will be responsible for storing the building and a return installation fee will be charged.

Please make sure there are no overhanging branches or foliage through the access route or over the base as our team are not able to remove these.

Our installers will need suitable parking within 25m of your entrance which must be available on the day for our vehicles. If there are any vehicle access problems please notify us in advance of your delivery and installation date. Please be aware that we cannot block roads, neighbours driveways, park on roads with fast moving traffic or bends with limited visibility.

If parking permits are required these are to be arranged and paid for by the customer prior to our arrival or upon arrival for the duration of the booking date. If parking is pay on the day this is to be arranged by and paid by the customer for the duration of the booking date.

Please allow clear and uncluttered access so we are able to carry your building safely.

We understand that not every property has straight access from where we unload to where the base is, however if there are any restrictions such as height (archways, doorways, height bar on gates, electrical wires, trees etc), sharp/tight turns, obstructions over 3ft in height requiring panels to be lifted over, or limited clearance at the base, we must be notified when placing your order to ensure the building is made to fit through any restriction. If we are not notified and the building will not go through the access it is the customers responsibility to pay any additional costs for us to alter the building, redeliver and install. If it is not possible to alter the building to fit through the restriction the customer will be responsible for the building at that time. It is extremely important that we are notified of anything that may cause a problem on the day of delivery and installation so the customer does not incur additional costs.

We do require the distance from the unloading area to the base to be 100m or less, if you feel the carry will exceed this please discuss with us as this may exceed the installation time.

Please allow for any roof overhang on the building if it is to be located near a fence, garage or any other structure.

Upon booking a delivery and installation date we will send you an email to confirm your chosen date along with some information to read with our terms and conditions attached which will explain all requirements in full.

We also offer bespoke non-standard sized and shaped buildings, so if there is something you require that you do not find in our brochure please ask for further information.

All timber sizes quoted are nominal i.e. before planing. All sizes are approximate.

As it is our policy to continually improve our products we reserve the right to change minor specifications from time to time.
